

International Medical Technologies (IMT)

Fact Sheet

OVERVIEW

International Medical Technologies is a manufacturer of advanced ophthalmology products. Its goal is to enable people who are suffering with various eye diseases to have the chance to experience life in focus again. IMT believes it is achievable by furthering innovation in the field of ophthalmology and producing the highest quality products for doctors and their patient.

HISTORY

In 1998, John Henson and Kevin Dean co-established an ophthalmological device manufacturing company originally called Imperial Medical Technologies. John Henson has been either in management or the CEO of multiple companies before taking a true interest in ophthalmology devices. Dean and Henson founded the company and worked together for years before Dean stepped down and Henson took over fully.
